### CareerFoundry

Full Stack Web Development September 2019 - April 2020

# McIntire School of Commerce, University of Virginia

Executive Certificate in Management September 2017 - November 2018

## Government Arts College, Bharathiyar University

Master of Science June 2002 - May 2004

# **Government Arts College, Bharathiyar University**

Bachelor of Science July 1999 - May 2002

### **EXPERIENCE**

### **Mainframe Lead & Developer**

Cognizant's Communication Media Technology Client February 2018 - Present

- Responsible for requirement gathering from Product Owners.
- Leads the offshore team and accountable for the Project Deliverables.
- In the annual maintenance project, configures business rules without prior hands-on experience. Enhances programs for a complex application. Collaborates with the users during UAT and deploys the project on time with zero defects.

### Mainframe Developer & Support

Cognizant's Retail Client October 2016 - January 2018

- Led a 3-person in optimizing the critical financial jobs to correct the errors by themselves. It reduced the tickets by 21% and enhanced resource productivity.
- Responsible for collaborating with the stakeholders, prioritizing the projects, and the production issues.
- In a data discrepancy of hundreds of products, built a process to sync data between the databases through a complex set of programs and jobs, and saved thousands of dollars.
- Analyzed the intricate legacy application that changes the dollarquantity values dynamically, provided a quick workaround to assist the producers to determine the broadcasting strategy, and saved thousands of dollars.

### **Mainframe Developer & Support**

Cognizant's Health Care Client February 2014 - September 2016

- Responsible for the support tasks and fix production issues in critical applications.
- Generated reports through complex queries for the business owners to make critical decisions.
- Enhanced COBOL programs that involved cross technologies like XML and lava
- Assisted the Java development and QA teams in setting up test data related to legacy tools.
- Led 4-person team and mentored during technical challenges.

#### Mainframe Developer, QA & Support

Cognizant's Banking & Financial Services Clients June 2006 - December 2013

- In maintenance tasks, analyzed many complex programs, drafted design, developed COBOL-DB2 and CICS modules, created unit case documents, set up test data, and performed unit testing. Ensured 100% code coverage using REXX tools.
- During tax seasons, built many adhoc programs to update shareholders' sensitive details and others, and delivered within the strict deadlines.
- Streamlined adhoc processes through a set of programs and jobs to trigger based on request. It reduced the production tickets by 5% and lessened manual intervention.
- Optimized COBOL programs and DB2 queries, assimilated into a single reusable program and saved thousands of dollars.
- As a Quality Analyst, set up test data and performed an exhaustive range of test cases, and logged defects in JIRA.
